The life of the world is being cut in half by Marie's Sea, between Alaska and Siberia.

Such is the implication of calculations presented by W. D. Lambert of the U.S. Coast and Geodetic Survey, a bulletin issued by the National Research Council.

The study of the earth on its axis is showing down, the report points out. Approximately 8,000,000,000 years ago the globe was in a state of revolution only once a month, and the earth was much larger than it is now.

Condition will be reached about Mr. Lambert explains by the accumulation of effects of the earth's rotation.

Water, dragged by the pull of the moon, is in friction with the sea and other factors. A small part of the tidal energy is transformed into heat by this friction, just as the result when two sticks are rubbed together.

Now the energy transformed into heat by this friction, Mr. Lambert says, is part of the rotational energy of the earth. At least 2,000,000,000 years ago the earth was torn from the sun with enormous force, and the earth's rotation upon its axis which it has kept up ever since. It is part of the energy of the original motion which keeps it in rotation, just as the energy required for a motor to keep it running is put by the motor itself to the plunger's arm.

The estimation of the energy loss are very uncertain, Mr. Lambert points out, but accepting them at their face value, the friction of the earth is being slowed down about one time in 100,000 years. The earth will always turn the same face towards the moon, and earth and moon together will continue their journey the same way. The earth's day will be a month long.

"If the moon in the past was much closer to the earth than now, might it be all our time has been almost in contact with it, this may suggest the idea? If we look still further back, might not the moon and earth together form a single body? A fragment separated from the parent earth and formed the moon, and the earth has since the day, lengthening the day, and the moon is being the moon from the earth."

By previous the division of the earth was, Prince Edward Island, \$20,000,000; Nova Scotia, \$12,338,000; New Brunswick, \$10,000,000; Ontario, \$13,338,000; Quebec, \$12,338,000; Saskatchewan, \$10,000,000; Manitoba, \$10,000,000; British Columbia, \$12,338,000.

In addition the Canadian National Railway carried 1,000,000 tons of goods, valued at \$14,133,000, the Canadian Pacific Railway, \$11,514,000, the Grand Trunk, \$1,000,000.

Up to the end of June, 80,000 families had been given direct relief. These figures were based on the department on the basis of persons receiving direct relief the total was the membership of 800,000. The number of the special works under the membership of 800,000. The number of the special works under the membership of 800,000.

Lean Year For Ducks

Four Breeding Seasons Will Be Responsible For Lack Of Waterfowl

Duck hunters from Quebec to California, and from Minnesota to the Gulf of Mexico, are being told, according to a statement made by Hon. Thomas Murphy, Minister of Agriculture, that the breeding season for ducks is being lowered reports of serious failure in the wild duck crop throughout the breeding grounds in the southern part of the prairie provinces. The chief migratory quackery of the western Canada has reported waterfowl almost entirely absent from the south-central zone of the province. Murphy said, and 90 per cent, of the 1,800,000 ducks are gone.

A game officer, after a three-month trip through what was usually the breeding grounds for ducks, reported that on the continent, reported ducks were practically non-existent. As almost the entire duck breeding ground in this area for its ducks. There should be large numbers of ducks this fall, Mr. Murphy said.

A conference has been held between Mr. C. Henderson, associate chief of the biological survey at Washington, and officers of the Department of the Interior with a view to alleviating the situation.

Three breeding seasons both this year and in 1931 combined with the steadily increasing army of hunters was responsible for the lack of waterfowl, it was stated.

A particularly intimate picture of the duck problem in British Columbia, by Owen Prince Leopold, and their baby daughter, Princess Josephine Charlotte, who they enjoyed their own bath on the sandy beach at Oatland, where they are spending much of their time during the summer.

The Tribune says: "A lack-to-back movement is inevitable. Natural causes are bringing it about. It is not practical solution of the unemployment problem and perhaps the only permanent one."

The Tribune says: "The news of a great many people familiar with present conditions in the unemployment problem. The practical task of organizing a back-to-back movement on the part of the unemployed is a task of the situation materially to be set on foot for private enterprise."

Penalty For Nude Paraders

Three Years Imprisonment May Be Imposed Under Proposed Amendment

Three years imprisonment for parading while nude may be imposed under an amendment to the criminal code which will be introduced in the House of Commons shortly by Hon. Hugh Gault, Minister of Justice.

The amendment is proposed with a view to putting a stop to nude parades by thousands of western Canada. It is comprehensive in its character. In the first place it provides a penalty of three years on summary conviction for nude paraders. The same penalty may be imposed on anyone found nude in any public place found nude on private property or on their own, or found nude on their own property exposed to public view.

The term "nude" is defined in the amendment as being so scantily clad as to be indecent.

The term "nude" is defined in the amendment as being so scantily clad as to be indecent.
